## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 7/26/10 has been entered.

### ***Information Disclosure Statement***

2. The information disclosure statement (IDS) submitted on 7/26/10 was filed after the mailing date of the Notice of Allowance on 6/9/10. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

### ***Allowable Subject Matter***

1. Claims 7-10, 13-15, 17, 21, and 23 are allowed.
2. The following is an examiner's statement of reasons for allowance:  
  
The claims are allowed for the same reasons set forth in the Notice of Allowance filed on 6/9/10. The references cited in the IDS do not teach or suggest the manner of

organizing poll groups of the current application. The most relevant prior art to the claims of the application are discussed below.

Masazumi (JP 55-049057) discloses a multi-polling system wherein terminals are divided into several groups and a terminal controller provides simultaneous polling control of each group for sending out data in a buffer based on time and response information. However, Masazumi does not disclose how the groups are organized.

Yoshinobu et al. (JP 61-094431) discloses a master station that polls slave stations belonging to a group wherein the slave stations have transmitters of different frequencies. The slave stations then respond to the poll with the frequencies and information distinct among the slave stations. However, Yoshinobu does not disclose how the groups are organized.

Shorey et al. (US 6,807,159) discloses Adaptive Probability based Polling Interval (APPI) mechanism for adjusting the polling interval based on predicting the expected arrival time for the next packet at each slave based on the distribution of inter-arrival times for the previous packets received at the slave (column 2, lines 60-67). However, the invention of Shorey pertains to the polling interval of each slave, not organizing a group.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
